s3604367 2017-02-28 11:29
Hi all

s3604367 2017-02-28 12:19
I've just added the template for
Trello

s3604367 2017-02-28 12:22
added an integration to this channel: <https://sept-lcjj.slack.com/services/B4BFQAA2H>

s3604367 2017-02-28 12:28
@s3604367 set the channel purpose: This channel is for team-wide communication and announcements. All team members are in this channel.

s3604367 2017-02-28 12:31
removed an integration from this channel: <https://sept-lcjj.slack.com/services/B4BFQAA2H>

s3604367 2017-02-28 12:36
Okay, I got Github (needs repo link) and Trello integration with Slack. Github integration on Trello also requires a repo link.

s3600396 2017-02-28 12:45
.... can we bracket names into our usernames? cos this is annoying idk your student ids

s3600396 2017-02-28 12:47
everyone get a profile pic cos i dont think u can change ur username. I shotgun using jesus as my profile pic

s3604367 2017-02-28 12:47
<http://stackoverflow.com/questions/28676437/slack-show-fullname-of-user-instead-of-username>

s3604367 2017-02-28 12:47
You set that in settings

s3600396 2017-02-28 14:00
oh

s3600396 2017-02-28 14:00
that sucks

s3600396 2017-02-28 14:00
i still want this dp doe

s3600396 2017-02-28 14:01
btw i dont think u added me to trello
yet

s3604367 2017-02-28 14:06
@s3604367 uploaded a file: https://sept-lcjj.slack.com/files/s3604367/F4APRR6HX/pasted_image_at_2017_03_01_01_06_am.png and
commented: You should be added s3600396

s3604367 2017-02-28 14:12
Okay deciding on hosting a web
server

s3604367 2017-02-28 14:13
VPS or Cloud Servers?

s3604367 2017-02-28 14:13
Going to use that hosting for other stuff
too

s3604367 2017-02-28 14:13
Couldnt get my dedicated server for security
reasons

s3600396 2017-02-28 14:36
cloud

s3604367 2017-02-28 14:46
Got VPS hosting

s3604367 2017-02-28 14:46
:slightly_smiling_face:

s3604367 2017-02-28 14:48
More details soon, I gotta sleep now c u later
today

s3604367 2017-03-01 04:57
Any update on the scrum meeting
Jarrry?

s3600396 2017-03-01 09:11
uploading to trello nwo

s3601725 2017-03-01 09:12

Sweet. Make sure you do the github aswell

s3604367 2017-03-01 09:12
VPS is now online

s3604367 2017-03-01 09:12
For me though, I gotta configure and install apache and such

s3600396 2017-03-01 09:12
alright i'll push this as my test push then

s3604367 2017-03-01 09:13
I need a link and invite to the repo

s3601725 2017-03-01 09:13
Alright sounds good

s3600396 2017-03-01 09:13
ummm wat is the github repo?

s3601725 2017-03-01 09:14
Im not sure if I can add you guys. Lachy might have to. Hang on

s3601725 2017-03-01 09:15
Yeah I don't think I can

s3604367 2017-03-01 09:16
All good I can wait

s3604367 2017-03-01 09:17
This will be the Php framework we'll be using
<https://laravel.com/>

s3601725 2017-03-01 09:17
Alright cool. Ill start reading into it

s3604367 2017-03-01 09:17
I have a subscription for tuts at <https://laracasts.com/> lemmie know if you want to use the account

s3604367 2017-03-01 09:18
And Php Unit for testing
<https://phpunit.de/>

s3604367 2017-03-05 10:17

Can't seem to add github to slack I need the git repo to allow read and write permissions to integrate it with slack

s3601725 2017-03-05 13:03

Lachy might have to do it then. He made the repo

s3604367 2017-03-06 04:58

<https://youtu.be/pFbVxXOvQ8I> this is a good resource to follow for managing Agile Trello boards
@s3600396 I would urge you to try watch this video

s3604367 2017-03-06 04:59

I've re-organised the board referring to the video

s3537901 2017-03-06 04:59

You guys might have to show me how to do the GitHub slack integration

s3604367 2017-03-06 04:59

Sure I'll show you in lecture

s3604367 2017-03-07 02:04

Template for Agile with Trello <https://trello.com/b/6otslC4i/template-board-agile-with-trello>

s3537901 2017-03-07 20:04

Should the user stories have their own card folder thing? So we don't fill up the sprint backlog with cards?

s3604367 2017-03-07 20:58

There shouldn't be too many cards for our user stories

s3604367 2017-03-07 20:59

The product backlog can be as big as it can get

s3604367 2017-03-07 21:02

The sprint backlog is what tasks should be prioritised on that sprint week

s3537901 2017-03-07 21:04

Ah ok, I have put a few user stories up on the sprint but they need some acceptance criteria yet

s3604367 2017-03-07 21:31

@s3604367 uploaded a file: <https://sept->

lcyj.slack.com/files/s3604367/F4FNHAZJA/image_uploaded_from_ios.jpg

s3537901 2017-03-07 21:32

Is that the sort of thing we should be doing?

s3604367 2017-03-07 21:32

When you're making user stories, you put them in the Product Backlog or Sprint Backlog (if you intend to work on it during the sprint)

s3537901 2017-03-07 21:33

Oh I thought the sprint was for what we are working on in that sprint

s3604367 2017-03-07 21:34

What you did was put them in the sprint list meaning they've been completed during that sprint week

s3604367 2017-03-07 21:34

Put*

s3604367 2017-03-07 21:37

@s3604367 uploaded a file: [https://sept-](https://sept-lcyj.slack.com/files/s3604367/F4F56Q3E1/image_uploaded_from_ios.jpg)

lcyj.slack.com/files/s3604367/F4F56Q3E1/image_uploaded_from_ios.jpg

s3604367 2017-03-07 21:39

I've moved the cards to the Product Backlog, if you intend to work on it this week then drag it to the Sprint Backlog

s3604367 2017-03-07 21:43

Have you referred to the scenario in the assignment spec for your user stories?

s3604367 2017-03-07 21:44

Was Craig meant to do user stories or Lach?

s3537901 2017-03-07 22:02

Both of us are working on it since the user stories are needed before I can get an idea for the UI mock-up and I need something to do this week for progress marks

s3537901 2017-03-07 22:02

And the stories so far are based on the scenario and functional requirements

s3604367 2017-03-07 22:04

Okay I'll check if users missing

 Okay I'll check if were missing anything

 **s3604367** 2017-03-08 03:40
@s3537901 Make sure you drag the cards you're working on to the In Progress list

s3601725 2017-03-09 06:33
Sorry I was supposed to do user stories last night but I got called in to work. Ill get them done tonight

 **s3604367** 2017-03-09 07:10
No problem, we also need to get those test cases out to Homy

 **s3604367** 2017-03-09 07:59
Okay I've just asked Homy and CC'ed all of you on the email

s3604367 2017-03-09 08:01
s3601725 Your main task for user stories is to complete the acceptance criteria for each story, since Lach completed the stories

s3601725 2017-03-09 08:01
Yeah no problem, I can do that

s3601725 2017-03-09 08:02
I probably wont do the testing scripts til the weekend. I'm pretty busy for the next two days

 **s3604367** 2017-03-09 08:02
No problem I can take over

s3601725 2017-03-09 08:03
I got it, its alright. Just don't expect them in the next two days

 **s3604367** 2017-03-09 08:04
I don't mind doing part of it since I will be developing functions anyway

s3601725 2017-03-09 08:06
Nah its fine. You don't need to do everything mate
haha

 **s3604367** 2017-03-09 08:08
Alright, if anything please do let me know. I have only this whole day to work on SEPT
:+1:

s3601725 2017-03-09 08:17
Haha no problem

s3604367 2017-03-09 08:57

@s3600396 you still need to complete the minutes for this Tuesday

s3537901 2017-03-09 09:01

We still need a few more user stories, should I finish of the rest? Since craig has work?

s3601725 2017-03-09 09:02

I'm gonna home soon. I'll do them, relax

s3600396 2017-03-09 09:04

keep forgetting to upload

s3600396 2017-03-09 09:04

have a look at it now

s3600396 2017-03-09 09:04

lachie

s3600396 2017-03-09 09:04

send me urs

s3600396 2017-03-09 09:04

i'll do them as use cases

s3537901 2017-03-09 09:17

They are all on the trello backlog

s3600396 2017-03-09 09:19

:+1:

s3604367 2017-03-09 09:54

That's alright, just remember to move the cards around and assign them yourself if you're working on it

s3604367 2017-03-09 09:54

:ok_hand::skin-tone-2:

s3601725 2017-03-09 12:52

Hey guys I finished the user stories but I don't have time right now (gotta wake up early) to put them up on trello in the format Johnny made. I'll just attach a pdf here so you can see them and I'll do it tommorow

s3601725 2017-03-09 12:52

@s3601725 uploaded a file: https://sept-lcjj.slack.com/files/s3601725/F4G0N13L4/a1_-_user_stories.pdf

s3601725 2017-03-09 12:53

Let me know if you want any changes made or anything

s3604367 2017-03-10 13:09

We need to organise another scrum meeting before Tuesday

s3601725 2017-03-11 01:13

Thats going to be difficult considering we don't have uni Monday

s3604367 2017-03-11 11:47

Idea would be to have it before the tut

s3601725 2017-03-11 12:31

Well its 2 and a half hours travel time both ways for me (longer for lachy). So I'd REALLY prefer not to come in Monday for a 5 minute meeting if it is possible

s3537901 2017-03-11 12:32

I will be unavailable Monday since I am away up the country in Marybough for the public holiday but you should still be able to reach me providing that there is enough signal up there for any queries. Also yeah travel is a real pain for a short meeting. Perhaps just for this week we set the scrum meeting for after Tuesday?

s3601725 2017-03-11 12:34

If we could do it over skype or something for this one that'd be much easier

s3604367 2017-03-11 12:39

Tuesday on the day before the tut is okay

s3604367 2017-03-11 12:39

Is it?

s3537901 2017-03-11 12:56

But our second scrum meeting is during the tute? Having two meetings on the same day defeats the purpose of having two meetings

s3604367 2017-03-11 15:31

We'll do it over skype

s3604367 2017-03-11 15:33

@s3604367 uploaded a file: <https://sept->

[icji.slack.com/files/s3604367/F4H1CN082/pasted_image_at_2017_03_12_02_33_am.png](https://sept-icji.slack.com/files/s3604367/F4H1CN082/pasted_image_at_2017_03_12_02_33_am.png)

s3604367 2017-03-11 15:34

Or we can use the <http://appear.in> link from the Trello board

s3604367 2017-03-11 15:34

I've just enabled the power up for the board

s3601725 2017-03-11 23:12

Ok cool. Let us know when you want to do it

s3604367 2017-03-12 01:34

We will schedule a time on Monday afternoon towards the night

s3601725 2017-03-12 01:45

Ok sounds good

s3600396 2017-03-12 09:58

im down

s3600396 2017-03-12 09:58

for either

s3604367 2017-03-13 03:51

I'm ready for a meeting at 4-midnight

s3604367 2017-03-13 03:51

today

s3601725 2017-03-13 03:51

Yeah I'm cool with that

s3537901 2017-03-13 04:08

Don't really have much signal, struggling even to send messages, might have to sit this one out and just catch up tomorrow

s3600396 2017-03-13 04:16

When u getting back?

s3604367 2017-03-13 04:17

No owrries

s3604367 2017-03-13 04:17

Jarry are you down?

s3604367 2017-03-13 04:17

how about Craig?

s3601725 2017-03-13 04:17

Yeah I'm cool

s3601725 2017-03-13 04:18

I'm a little stuck with the php unit stuff, its really hard to do. So I needed to talk to you guys about that (not so much the actual code, just what to write them for)

s3604367 2017-03-13 04:18

Sure we can speak about it on the meeting

s3601725 2017-03-13 04:19

Alright cool

s3600396 2017-03-13 04:20

can we have the meeting at like 8?

s3600396 2017-03-13 04:20

going out to family friends house at 4

s3601725 2017-03-13 04:21

Fine by me

s3604367 2017-03-13 05:30

No worries

s3601725 2017-03-13 09:01

I'm on trello <http://appear.in> whenever you guys are ready

s3604367 2017-03-13 09:42

My bad 40 mins late

s3604367 2017-03-13 10:47

I looked at the assignment spec, it says we need a class diagram for final submission

s3601725 2017-03-13 11:01

Yeah we'll basically draft that tomorrow and we'll do a final one later on

s3604367 2017-03-14 07:52

<https://laracasts.com/>

s3604367 2017-03-14 07:53

:Tuesday17 (email:password)

s3604367 2017-03-14 07:53

<https://laracasts.com/series/laravel-from-scratch-2017>

s3604367 2017-03-14 07:54

Watch that chapter first to understand the framework

s3601725 2017-03-14 07:54

Sweet. Thanks mate

s3604367 2017-03-14 07:54

Feel free to watch anything else there if you're curious

s3537901 2017-03-14 08:52

Thanks man this should be useful for starting code this week

s3604367 2017-03-14 10:32

I strongly encourage you guys to watch the whole chapter

s3604367 2017-03-14 10:33

Especially @s3600396

s3604367 2017-03-14 10:34

And do some local development from a 'dev' branch on github

s3604367 2017-03-14 10:56

I will plan to add classes onto the dev branch and comment functionality where you guys can add

s3537901 2017-03-14 11:03

Just assign whatever you want done and I'll pick it up since I don't really have an area of expertise here

s3604367 2017-03-14 11:31

@s3601725 @s3600396 <https://laracasts.com/series/laravel-from-scratch-2017/episodes/22>

Explains PHPUnit testing in Laravel

s3604367 2017-03-14 11:54

@s3537901 Can you verify the user stories again?

s3604367 2017-03-14 11:54

And iterate a bit more in the acceptance tests

s3604367 2017-03-14 11:55

It's going to be the basis of our tasks

s3604367 2017-03-14 11:55

I will put the ones that need verification in the list

s3604367 2017-03-14 12:29

@s3600396 I've given you a few user stories to check

too

 **s3604367** 2017-03-14 15:00
<http://johmodding.com/database>

 **s3604367** 2017-03-14 15:00
student:Tuesday17

 **s3604367** 2017-03-14 15:00
You would mainly use phpmyadmin as a debug tool since Laravel uses its own CLI to create tables

 **s3604367** 2017-03-15 12:15
I still need you guys to clear out and add more detail to the user stories

 **s3604367** 2017-03-15 13:16
Okay, I've just completed writing out the readme for Git. It has all the instructions on how to develop on the project.

 **s3604367** 2017-03-15 13:16
<https://github.com/rmit-s3604367-johnny-huynh/SE-PT-Assignment>

 **s3604367** 2017-03-15 13:38
Going to add classes tomorrow

 **s3604367** 2017-03-15 13:38
Well today in this instance

 **s3604367** 2017-03-16 13:27
Correction :Tuesday17 is the Laracasts account

s3601725 2017-03-18 22:50
Hey guys I might be a bit late on finishing my part. My internet has been down for the last 3 days. I'm doing as much as I can locally but its a real pain in the ass

 **s3604367** 2017-03-18 23:33
That's okay

 **s3604367** 2017-03-18 23:33
Can we do a meeting tonight?

s3601725 2017-03-18 23:38
Well I dont have internet, so I dont know how ill be able to attend

s3601725 2017-03-18 23:40

But im going to uni right now and im gonna download all the laravel tutorials and documentation so I should be able to do everything I need offline

s3604367 2017-03-18 23:41

Alright

s3604367 2017-03-18 23:42

I'm going to work on the interface tonight

s3604367 2017-03-18 23:42

and get login and reg working

s3604367 2017-03-18 23:42

By then we'll need to finish at least one user story

s3604367 2017-03-18 23:42

And we can get some unit testing on the way

s3601725 2017-03-18 23:47

Yeah I'll set up the unit testing and the rest of the model classes and their sql migration templates and we should be good

s3601725 2017-03-19 03:59

Got my internet working again so if you want to do a meeting or whatever I'm all good (on a side note FUCK TELSTRA)

s3604367 2017-03-19 07:33

Okay 8-9 tonight?

s3604367 2017-03-19 07:33

We'll do another one tomorrow at the lecture

s3604367 2017-03-19 08:31

Meeting at 9

s3604367 2017-03-19 08:51

We can push the meeting until 9:30 - 10 gotta have dinner

s3601725 2017-03-19 09:09

ok sure

s3537901 2017-03-19 09:13

Is there a particular reason for having one earlier? Rather than just doing the two during the

week?

s3604367 2017-03-19 09:15

Are we meant to have two meetings each week?

s3601725 2017-03-19 09:15

yes, including the one in class

s3601725 2017-03-19 09:15

Only one is required outside the clas

s3537901 2017-03-19 09:15

yes we usually have one in class and one on monday after the lecture

s3604367 2017-03-19 09:16

Okay then it we can do on one Monday

s3604367 2017-03-19 09:16

That sounds better

s3537901 2017-03-19 09:16

But if there is something specific you want to mention we can do a short meeting tonight

s3601725 2017-03-19 09:16

I'd prefer it aswell, I'm still working on my stuff and it won't be done in time for the meeting. But it will be tommorow

s3601725 2017-03-19 09:16

It will only mean I have to stay up later if we do
haha

s3604367 2017-03-19 09:16

No problem

s3537901 2017-03-19 09:17

Is there some tasks or code i should be working on? I feel like I haven't really done all that much outside of user stories and wireframes (that are now obsolete)

s3604367 2017-03-19 09:17

Just about ot push the ui up for login and register so it just needs functionaility

s3601725 2017-03-19 09:18

I'm almost finished the SQL migrations and template models if you want to help with tests

after

s3604367 2017-03-19 09:18

You guys can work on the login and registration

s3601725 2017-03-19 09:19

Actually yeah do the login/registration. We need functional elements for the tute

s3601725 2017-03-19 09:19

I can do the testing

s3537901 2017-03-19 09:19

I can do that, Craig has the database set up so it will give me something to show

s3601725 2017-03-19 09:19

No, thats what the migrations do. I'm almost there

s3604367 2017-03-19 09:19

Okay pushing the ui now

s3537901 2017-03-19 09:19

Has homie given us the TDD examples we need to follow?

s3604367 2017-03-19 09:19

You know how to run it?

s3604367 2017-03-19 09:19

Not yet

s3604367 2017-03-19 09:19

I think we should just document as we go

s3537901 2017-03-19 09:20

Database/migration its all very similar

s3601725 2017-03-19 09:20

Don't need them, the laracasts video on it was actually VERY good

s3537901 2017-03-19 09:20

yes I got about half way through the other day it looks relatively straight forward with a bit of help from the videos

s3601725 2017-03-19 09:21

Yeah, I've already written the migrate files actually they just won't seem to push to the database

when I run "php artisan migrate", trying to figure out why

s3604367 2017-03-19 09:21

Okay latest build is on the dev branch

s3604367 2017-03-19 09:22

Yeah so if you read the git readme i made I have some troubleshooting methods to fix it

s3604367 2017-03-19 09:22

Might be because your .env file is not set to the local database file thats in repo

s3604367 2017-03-19 09:23

Since we're using SQLite for local dev and MySQL for production (our VPS)

s3601725 2017-03-19 09:23

No it is, It pushes the default users table. Just not the tables I actually created

s3601725 2017-03-19 09:23

Nah I'm using mysql for local aswell

s3604367 2017-03-19 09:23

Try php artisan migrate:refresh

s3601725 2017-03-19 09:23

I did, said theres nothing for it to rollback to

s3604367 2017-03-19 09:23

Yeah you can use either, it's just SQLite is set there for you in case

s3601725 2017-03-19 09:23

Ok cool, just change the .env then you're good anyway

s3604367 2017-03-19 09:24

Yeah just do some research I only know to an extent

s3601725 2017-03-19 09:24

Yeah, I'm looking into it

s3604367 2017-03-19 09:25

Okay, if you host the dev branch urls /register and /login now have the UI for it

s3604367 2017-03-19 09:25

localhost:8000/register etc.

s3537901 2017-03-19 09:25

s3537901 2017-03-19 09:25

Can we just clone the repo to use laravel or do we need to install it locally to use it?

s3604367 2017-03-19 09:25

Clone is and follow the readme

s3604367 2017-03-19 09:25

it*

s3604367 2017-03-19 09:26

I should cover most of the instructions, either that or ask one of us

s3601725 2017-03-19 09:26

I'm running it on linux so I had to do some trickery, but its pretty easy to do

s3604367 2017-03-19 09:26

Yeah I'm running on OSX and it's different

s3604367 2017-03-19 09:26

to Windows

s3537901 2017-03-19 09:26

yeah the readme says dev server but i suppose that holds true if you are locally hosting until we push the main branch

s3601725 2017-03-19 09:26

Yeah, theres a .env file where you just change where the database is

s3604367 2017-03-19 09:27

Yeah so you clone the dev branch and work on it then

s3604367 2017-03-19 09:27

Make pull requests to merge to master for the VPS

s3604367 2017-03-19 09:30

Okay you can pull for the latest build now

s3537901 2017-03-19 09:31

Ill get on to it in a minute, having dinner now

s3601725 2017-03-19 09:32

I'm just gonna mute this chat while I'm working on this, I don't want to be up all night. Text me if

you need me

s3601725 2017-03-19 09:32
0407 201 893 if you don't have my
number

s3604367 2017-03-19 09:32
No worries <4

s3604367 2017-03-19 09:32
:heart:

s3537901 2017-03-19 10:01
@s3537901 uploaded a file: https://sept-lcjj.slack.com/files/s3537901/F4KNGSARE/pasted_image_at_2017_03_19_09_01_pm.png

s3600396 2017-03-19 10:04
im gonna start doing the user reg
tonight

s3604367 2017-03-19 10:18
Alright you'll probably need the Laracasts videos for
reference

s3600396 2017-03-19 10:18
yea im gonna start watching them
now

s3604367 2017-03-19 10:21
Would suggest to make a new branch for any new features in
future

s3604367 2017-03-19 10:22
You'll working on login and reg, let us know if you need
help

s3604367 2017-03-19 11:56
@s3537901 Are you working on the view bookings
page?

s3537901 2017-03-19 12:06
I thought s3600396 was working on registration and I was working on login? Would you rather
have the bookings page done?

s3600396 2017-03-19 12:09
^

s3604367 2017-03-19 12:11
We need both tasks done

s3604367 2017-03-19 12:12

If you look at the recent email they sent us, we need login/registration completed and one completed user story not relating to login/registration

s3604367 2017-03-19 12:13

My idea that it would be the view my bookings view since it

s3604367 2017-03-19 12:13

's an easy task

s3604367 2017-03-19 12:13

<https://trello.com/c/ocsxs83M/46-expected-this-week>

s3604367 2017-03-19 12:13

We also need test cases for it

s3604367 2017-03-19 12:15

Just found out we're missing a user story for customers viewing their bookings

s3601725 2017-03-19 12:15

Test cases are almost done, but I want to go to bed. So I'll go in early and finish em

s3601725 2017-03-19 12:15

And we aren't, its in the sprint backlog

s3604367 2017-03-19 12:16

That's for the business owner

s3604367 2017-03-19 12:16

Ohh I see

s3601725 2017-03-19 12:16

"As a customer I would like to login so that I can view available bookings"

s3604367 2017-03-19 12:16

My bad

s3601725 2017-03-19 12:16

All good

s3601725 2017-03-19 12:17

But yeah, I'll finish them in the morning. Only 2 classes left anyway. Night boys

s3604367 2017-03-19 12:17

Night

s3604367 2017-03-20 01:07

Hey @s3601725 when we get to the lecture can you give us a rundown on how the test cases work, so we're all on board with the TTD concept

s3604367 2017-03-20 01:08
Great work on it by the way

s3601725 2017-03-20 02:29
Yeah no problem, thanks
mate

s3604367 2017-03-20 02:31
@s3600396 We're late on functionality for login and register, I'll takeover if you dont have it done by tonight

s3604367 2017-03-20 02:32
@s3600396 I'll help you setup and at the
lecture

s3601725 2017-03-20 02:33
I can help too, I can takeover backend and get that up and running pretty
quick

s3604367 2017-03-20 04:19
@s3601725 you uploaded the unit.bat on the main
branch

s3601725 2017-03-20 04:20
Was I not supposed to?

s3604367 2017-03-20 04:20
The master branch is for deploying onto the
site

s3604367 2017-03-20 04:21
We do all dev stuff in the dev
branch

s3604367 2017-03-20 04:21
Sorry if it wasnt clear

s3601725 2017-03-20 04:21
The batch just runs the tests, it shouldn't matter where it
is

s3601725 2017-03-20 04:21
It will only run if you explicitly run
it

s3604367 2017-03-20 04:22
Yeah I know

s3604367 2017-03-20 04:23
But all the updated code is on the dev
branch

s3601725 2017-03-20 04:23

Ah ok fair enough

s3604367 2017-03-20 04:23

We only use the master once we merge the dev to master

s3604367 2017-03-20 04:23

Through pull requests

s3601725 2017-03-20 04:23

Ok that makes sense, I'll put it on the dev branch next time

s3604367 2017-03-20 04:23

e.g. a new feature added in dev then we make a pull request and merge

s3604367 2017-03-20 04:23

No worries man

s3601725 2017-03-20 04:24

Also I'm gonna merge your model factory with mine because I forgot to upload that

s3604367 2017-03-20 04:24

Yeah

s3604367 2017-03-20 04:24

I just found out how to do it today

s3601725 2017-03-20 04:24

I made one for the unit tests

s3604367 2017-03-20 04:24

All good

s3604367 2017-03-20 06:19

https://github.com/fzaninotto/Faker#fakerprovideren_usaddress

s3604367 2017-03-20 09:35

Any progress yet?

s3604367 2017-03-20 09:35

@s3600396

s3600396 2017-03-20 09:41

I messaged u on fb about a fatal error i got

s3604367 2017-03-20 10:44

Uploaded the meeting for week 3 meeting

s3601725 2017-03-20 12:19

Registration form is working, just working on validation. Making sure it passes all the tests

s3537901 2017-03-20 12:25

I've just pushed a basic booking page to GitHub. @s3604367 can you please have a look, somehow I broke the styling just on this page

s3601725 2017-03-20 13:02

Registration is passing all tests and has been uploaded to dev branch, should be good to go

s3604367 2017-03-22 10:16

If you check the web routes theres ``Route::get('/admin', 'BusinessOwnerController@index');``

s3537901 2017-03-22 10:17

ill need to change the controller no?

s3604367 2017-03-22 10:17

Go to the controller and you can see what it does

s3604367 2017-03-22 10:17

```
`public function index() { if (BusinessOwner::first() && Auth::check()) { return view('admin.index'); } elseif (BusinessOwner::first()) { return redirect('/admin/login'); } else { return redirect('/admin/register'); } }`
```

s3604367 2017-03-22 10:18

Do you know what it means?

s3537901 2017-03-22 10:18

what is `::first()` and `Auth::check()`? are these need for the basic dashboard?

s3604367 2017-03-22 10:21

Okay so the way Laravel gets records from the database by using the ORM framework which wraps around the database. So instead of traditional querying, you can call the model (in this case the BusinessOwner) to get the first record

s3604367 2017-03-22 10:22

@s3604367 uploaded a file: https://sept-lcj.slack.com/files/s3604367/F4MUTT3EY/pasted_image_at_2017_03_22_09_22_pm.png

s3604367 2017-03-22 10:22

So that's why the first function is there

s3604367 2017-03-22 10:22

Auth::check means that it checks if you're logged in

s3604367 2017-03-22 10:23

Using the Auth method from Laravel

s3604367 2017-03-22 10:23

class*

s3537901 2017-03-22 10:23

Can i remove this until you get the login working?

s3604367 2017-03-22 10:23

Yeah just comment it out

s3537901 2017-03-22 10:23

just connect directly to /admin

s3537901 2017-03-22 10:25

and how do i make sure that BusinessOwner::first() is true?

s3537901 2017-03-22 10:26

or can this be commented out as well?

s3604367 2017-03-22 10:26

You `count(BusinessOwner::first())`

s3604367 2017-03-22 10:27

This checks that theres a business owner registered in your db

s3537901 2017-03-22 10:27

ok

s3537901 2017-03-22 10:34

@s3537901 uploaded a file: https://sept-lcjj.slack.com/files/s3537901/F4M7XFPMX/-_.php

s3537901 2017-03-22 10:35

where is admin.index?

s3604367 2017-03-22 10:44

you have to make it

s3537901 2017-03-22 10:45

ah ok, i just samed it summary so ill change it to index

s3537901 2017-03-22 10:48

I might need your help setting up the template, with all the bootstrap and

stuff

s3604367 2017-03-22 10:49
Alright

s3604367 2017-03-22 10:51
Teamviewer whenever you're
ready

s3537901 2017-03-22 10:52
629 715 594

s3537901 2017-03-22 10:52
a9pw92

s3604367 2017-03-22 10:53
What's your issue?

s3537901 2017-03-22 10:53
ok so all the files came in the
zip

s3537901 2017-03-22 10:53
i dont know where to put them and how to reference
them

s3604367 2017-03-22 10:54
What's this?

s3537901 2017-03-22 10:54
It had a download button

s3537901 2017-03-22 10:54
That came with all the files it
needed

s3604367 2017-03-22 10:55
Show it in the browser

s3537901 2017-03-22 10:55
Right now none of the none of the styling
works

s3537901 2017-03-22 10:55
Cas I didn't have the css

s3537901 2017-03-22 10:55
Or js

s3604367 2017-03-22 10:56
Best idea would of been copying hte
source

s3604367 2017-03-22 10:56
the

s3537901 2017-03-22 10:56

s3537901 2017-03-22 10:55
I did

s3604367 2017-03-22 10:56
Show me a browser

s3537901 2017-03-22 10:56
Forgot to grab the files too

s3537901 2017-03-22 10:58
Oh I looked at the wrong
one

s3604367 2017-03-22 10:59
We dont need the JS or Bootstraps CSS since laravel comes iwth
bootstrap

s3604367 2017-03-22 10:59
with*

s3537901 2017-03-22 10:59
We still need the dashboard? css
right?

s3604367 2017-03-22 10:59
Except we need the dashboards custom
css

s3604367 2017-03-22 11:01
The way Laravel stores CSS is through
SASS

s3604367 2017-03-22 11:02
You can traditionally reference a custom .css file but it would be recommended to use
Sass

s3604367 2017-03-22 11:02
Sass is a wrapper for CSS

s3537901 2017-03-22 11:02
Can't? we just reference it this
time?

s3604367 2017-03-22 11:03
Sure but then we need to refactor it
eventually

s3604367 2017-03-22 11:03
+ time

s3537901 2017-03-22 11:03
Seems like a lot of conversions to load a
template

s3604367 2017-03-22 11:03
It's simple once you know it

s3604367 2017-03-22 11:04

It uses Sass to compile back to CSS

s3537901 2017-03-22 11:04

That's a lot of css

s3604367 2017-03-22 11:04

That's what Sass does

s3604367 2017-03-22 11:05

It includes Bootstraps default CSS

s3604367 2017-03-22 11:05

All in one file

s3537901 2017-03-22 11:05

Ok how do we merge the template with sass?

s3604367 2017-03-22 11:05

Do you have node js?

s3537901 2017-03-22 11:06

Not that I know of

s3604367 2017-03-22 11:06

Basically we need Node js to compile sass to CSS

s3604367 2017-03-22 11:06

Because browsers can't read sass files like .scss

s3604367 2017-03-22 11:08

This is the main sass file

s3604367 2017-03-22 11:08

See how it imports the bootstrap wrapper CSS

s3604367 2017-03-22 11:10

Laravel does node js to do the compiling stuff like minifying js files and using sass

s3537901 2017-03-22 11:10

Then why was it working before?

s3604367 2017-03-22 11:10

For what?

s3604367 2017-03-22 11:10

The bookings page?

s3537901 2017-03-22 11:10
Yeah

s3537901 2017-03-22 11:10
Everything loaded correctly

s3604367 2017-03-22 11:10
That's a different issue

s3604367 2017-03-22 11:11
I fixed it because it wasn't referencing the compiled css
file

s3604367 2017-03-22 11:11
e.g. localhost/bookings/css/app.css where it doesn't exist in
/bookings

s3604367 2017-03-22 11:11
it exists in the root

s3604367 2017-03-22 11:12
`localhost/css/app.css`

s3537901 2017-03-22 11:12
Oh so we need to recompile it with
node.js

s3604367 2017-03-22 11:13
Okay what I'm doing right now is installing the node dependency
packages

s3604367 2017-03-22 11:14
Just like how there's composer for
php

s3604367 2017-03-22 11:14
There's npm for java

s3537901 2017-03-22 11:14
So many dependencies

s3604367 2017-03-22 11:14
Yeah only two major dependency
managers

s3604367 2017-03-22 11:14
One for each language

s3604367 2017-03-22 11:15
It's a lot to take in because I'm jump back and
forth

s3604367 2017-03-22 11:15
And because there's literally a lot to
learn

s3604367 2017-03-22 11:17

But most of the content needed to learn is in the laracast
vids

s3604367 2017-03-22 11:21

When running `npm run dev` it compiles all js and css files
defined

s3604367 2017-03-22 11:22

This feature is called Mix in
laravel

s3537901 2017-03-22 11:23

Need to serve

s3537901 2017-03-22 11:25

Thanks

s3604367 2017-03-22 11:25

Do you need help with the yield and section
stuff?

s3537901 2017-03-22 11:25

I'll clean it up tomorrow but I have to sleep
now

s3537901 2017-03-22 11:25

No I think I have that down

s3604367 2017-03-22 11:25

Alright

s3537901 2017-03-22 11:25

Thanks again for all this

s3604367 2017-03-22 11:26

All good

s3604367 2017-03-22 11:26

Ask me anything I'm happy to help even if it's something
small

s3604367 2017-03-23 06:42

I'm going to work on test cases for customer registration since it pairs with live validation on form
that I was working on

s3537901 2017-03-23 09:19

Someone should do some mockups for next
week.

s3604367 2017-03-23 09:23

I can do that

s3604367 2017-03-23 09:23

 What sort of mockups do we need?

 **s3537901** 2017-03-23 09:42
Probably just a basic wireframe will be enough

 **s3604367** 2017-03-23 09:45
Yeah of the dash?

 **s3604367** 2017-03-23 09:46
I'll setup a card just figure out what sort of wireframes we need

 **s3537901** 2017-03-23 09:49
No not of the dash, of the screen we are doing next week, so like the employee screen or something

 **s3604367** 2017-03-23 10:27
The dashboard contains all admin functions including employee availabilities

 **s3537901** 2017-03-23 10:41
Yeah but they don't have to be fully functional yet

 **s3537901** 2017-03-23 10:44
Like right now we only have summaries done, so we can do the other functionality in the coming weeks. Otherwise we will run out of tasks to do. The mock-up just has to be an example of what the functionality will look like within the dashboard.

 **s3604367** 2017-03-23 10:47
Yeah that's what I meant

 **s3604367** 2017-03-23 10:47
I'm only do wireframes

 **s3604367** 2017-03-23 10:47
doing*

 **s3604367** 2017-03-23 10:47
And whatever's assigned to me on Trello

 **s3604367** 2017-03-23 10:49
The employee screen is out of the scope

 **s3604367** 2017-03-23 10:49
If you're thinking about having employees logging in and views rosters etc.

s3604367 2017-03-23 10:58

Also on another note, I've added the Laravel Dusk package to composer for browser tests, so do a `git pull` and `composer install` to install the package

s3604367 2017-03-25 02:43

@s3600396 You still haven't finished the user stories

s3604367 2017-03-26 00:21

Well still need to fix the bugged owner login

s3601725 2017-03-26 00:38

Working on it right now

s3604367 2017-03-26 00:38

Okay, I've almost completed registration customer test cases

s3604367 2017-03-26 00:38

All through TDD

s3604367 2017-03-26 00:38

Ironed out validation rules with TDD

s3604367 2017-03-26 00:39

Finally understood why people do TDD

s3601725 2017-03-26 00:42

Fair enough. I've been working on graphics and CT all week. So if anybody needs help with CT let me know. I'm pretty confident with all my answers

s3604367 2017-03-26 00:42

Deadline for CT is tonight?

s3601725 2017-03-26 00:43

Yeah

s3604367 2017-03-26 00:43

Hmmm

s3604367 2017-03-26 00:43

I'm confident to an extent
haha

s3601725 2017-03-26 00:43

Haha fair enough

s3601725 2017-03-26 01:15

Should I also be combining the business owner login and the customer login after I get it working?

s3601725 2017-03-26 01:32

Well I fixed it, so I'm just going to take that as a yes and do it

s3604367 2017-03-26 01:53

Gotta keep it separate since it's in different tables

s3604367 2017-03-26 01:53

But if it work gotta show me how

s3604367 2017-03-26 01:53

works

s3601725 2017-03-26 01:53

Yeah but its supposed to be all on one screen. Not two different login forms

s3601725 2017-03-26 01:54

You just didn't specify the guard you were using. So it defaulted to customer

s3604367 2017-03-26 01:54

Oh I see

s3604367 2017-03-26 01:54

So if I login as a customer with the same username as business owner what happens?

s3601725 2017-03-26 01:55

A customer shouldn't be able to take the business owner's username

s3604367 2017-03-26 01:55

Yeah, should it check for that in validation?

s3604367 2017-03-26 01:55

I'll setup another test case for it if you want

s3601725 2017-03-26 01:55

I already did that originally

s3604367 2017-03-26 01:56

Where is it?

s3601725 2017-03-26 01:56

Wait thats a lie. I did it for login but not for register

s3604367 2017-03-26 01:57

s3604367 2017-03-26 01:57

Yeah all good, I'm doing form validation anyway

s3601725 2017-03-26 01:57

Ok sweet

s3604367 2017-03-26 01:57

All my tests are in
`tests/browser/CustomerRegisterTest.php`

s3604367 2017-03-26 01:57

For customer registration

s3604367 2017-03-26 01:57

It uses `php artisan dusk` since it literally tests in the browser

s3601725 2017-03-26 01:58

Ok cool. I'll have a look later. I'll finish combining the login forms first

s3604367 2017-03-26 01:58

It still uses PHPUnit but wraps with Dusk

s3601725 2017-03-26 01:58

Oh nice, thats neat

s3604367 2017-03-26 01:58

Can you check what we need this week?

s3604367 2017-03-26 01:58

I don't have a clear understanding on where we're at in terms of functionality

s3601725 2017-03-26 01:59

It was pretty ambiguous, basically says make more progress haha

s3604367 2017-03-26 01:59

Yeah... I'll just try make it look 'pretty'

s3601725 2017-03-26 01:59

Haha fair enough. I'll finish this stuff and I'll see what else needs to be done

s3604367 2017-03-26 02:00

Np

s3604367 2017-03-26 02:01

Another thing, should be have login and reg for customers in the customer controller? like the

business owner controller

s3601725 2017-03-26 02:01

Yeah that was my other job to clean up those controllers

s3604367 2017-03-26 02:02

Yeah once you're done git push it all on the repo and I'll verify

s3604367 2017-03-26 02:02

Just decide on what structure we're using

s3601725 2017-03-26 02:02

I'll probably keep the login controller to handle both kinds of login (as they are the same form) and then put registration inside the models

s3601725 2017-03-26 02:02

Seems like the cleanest way of doing itr

s3604367 2017-03-26 02:02

Yeah entirely personal pref

s3601725 2017-03-26 02:03

or maybe I'll abstract the logins into the models aswell, and just call them from the controller. Keep it centralized

s3604367 2017-03-26 02:03

As long as everyone knows

s3601725 2017-03-26 02:03

Yeah fair enough

s3601725 2017-03-26 02:03

I'll comment my code and make sure it's all pretty straight-forward

s3604367 2017-03-26 02:03

(y)

s3601725 2017-03-26 02:03

And we have two register functions at the moment. So that definitely needs to be fixed

s3604367 2017-03-26 02:04

Yeah though one of it registers the business and owner in the same table

s3601725 2017-03-26 02:04

No, we have two for just

customer

s3604367 2017-03-26 02:04
Oh I see

s3604367 2017-03-26 02:04
Yeah fix that haha

s3601725 2017-03-26 02:05
Yeah I will haha

s3601725 2017-03-26 02:05

Alright, I'm gonna ignore this chat while I work or I'll get nothing done. I'll let you know when I'm finished

s3604367 2017-03-26 02:18

@s3537901 Great work on the dashboard, I'll just modify the CSS and do some slight adjustments to your dashboard

s3537901 2017-03-26 02:33
Sure, let me know if you want help

s3600396 2017-03-26 05:32
so wat do u guys want me to do?

s3601725 2017-03-26 05:57

Ok so I've refactored a lot of the code. I've now made it so that there is no register controller. Logins of both customer and business owner are done from within their controllers but redirecting is done through the login controller

s3601725 2017-03-26 05:58

I've made it so its impossible to get to certain pages without authentication, aka going to the admin registration path when an admin is already registered will just redirect you back to the login page

s3601725 2017-03-26 05:58

I've also made the registration form repopulate the data you put in if validation fails

s3604367 2017-03-26 06:09
@s3600396 look at the trello theres assigned tasks

s3604367 2017-03-26 06:10
@s3601725 alright
awesome

s3601725 2017-03-26 06:10

If you want to verify it and let me know if anything breaks (You'll need to migrate the database btw)

s3604367 2017-03-26 06:19

Yeah I'll run my test cases for customer registration validation

s3604367 2017-03-26 06:25

@s3600396 instead of us finding what to do, try to decrypt the assignment spec and see what's needed for this week

s3604367 2017-03-26 06:26

We've all been trying to do that for the past weeks

s3604367 2017-03-26 06:26

Discuss what ideas you have

s3604367 2017-03-26 06:30

@s3604367 uploaded a file: https://sept-lcjj.slack.com/files/s3604367/F4P32SWM6/pasted_image_at_2017_03_26_05_28_pm.png and commented: I've made the validation rules more simplified for customer registration. Phone field can contain symbols including +, ., (,) and -

s3601725 2017-03-26 06:31

Alright cool

s3601725 2017-03-26 06:32

So is anybody actually adding any functionality for this week?

s3604367 2017-03-26 06:33

Not quite sure what we need for functionality

s3601725 2017-03-26 06:33

Well we need to present functionality. Otherwise it looks like we've done nothing

s3604367 2017-03-26 06:33

Yeah

s3604367 2017-03-26 06:33

I'm just running tests first

s3601725 2017-03-26 06:33

Ok cool, if you can get a stable build going I might add some admin functions in or something

s3604367 2017-03-26 06:34
Yeah that sounds good

s3601725 2017-03-26 06:34
I don't start til 4:30 tommorow, so take your time

s3604367 2017-03-26 06:34
:+1:

s3604367 2017-03-26 11:32
I've just completed all tests for customer reg and form validation

s3604367 2017-03-26 11:33
Re-organised the views folder to have customer login and register in the /customer folder

s3604367 2017-03-26 13:31
We need the following test classes on this Trello card. I've just completed one in `tests/Browser`

s3604367 2017-03-26 13:31
<https://trello.com/c/VYQcrCpk/54-re-visit-test-cases>

s3604367 2017-03-26 13:32
Run `php artisan dusk` to run the tests in /browser

s3604367 2017-03-26 14:10
I've arranged some tasks you guys can do in the sprint backlog. We may need to do those test classes as soon as possible.

s3604367 2017-03-26 14:10
@s3604367 uploaded a file: https://sept-lcjj.slack.com/files/s3604367/F4QFK78NA/pasted_image_at_2017_03_27_01_10_am.png

s3601725 2017-03-26 20:58
Alright cool I'll have a look at some of them today

s3604367 2017-03-27 12:39
@s3600396 You have some assigned tasks you can do today or tomorrow

s3601725 2017-03-27 12:40
Hey Johnny is there a way to change the dusk default testing root?

s3601725 2017-03-27 12:40

It keeps going to <http://localhost> I need it to go to <http://localhost:8000>

s3604367 2017-03-27 12:40
Not sure you might need to do some research

s3604367 2017-03-27 12:40
Apparently they're acceptance tests

s3601725 2017-03-27 12:40
Yeah all good, Just figured you might know already

s3604367 2017-03-27 12:40
I've cleans up unit tests

s3604367 2017-03-27 12:40
cleaned*

s3601725 2017-03-27 12:41
I'll write mine once I get this dusk thing worked out

s3604367 2017-03-27 12:41
Sure np

s3601725 2017-03-27 12:42
Got it, just need to change your env APP_URL path if anyone else has a problem with it

s3604367 2017-03-27 13:18
I've just added a few test cases for bookings in ``/browser``

s3604367 2017-03-27 13:18
For BookingsTest.php

s3604367 2017-03-27 13:18
I'm done for the night
:slightly_smiling_face:

s3604367 2017-03-27 13:19
Also slightly changed some stuff in wireframes <https://trello.com/c/szduDJjc/66-5-wireframes-mockup-3>

s3601725 2017-03-27 13:33
Alright night man. I'll get these test cases for admin registrastion and customer login done

s3604367 2017-03-28 06:06
<https://laravel.com/api/5.4/index.html>

s3604367 2017-03-29 09:26
<https://laracasts.com/series/phpunit-testing-in-laravel>

s3604367 2017-03-29 09:27
Here's a good resource in Laravel testing, it should include unit testing examples at the start

s3604367 2017-03-30 05:12
I've found another resource on 'unit testing' Eloquent Models, which is the models we're working on

s3604367 2017-03-30 05:12
<https://laracasts.com/series/how-do-i/episodes/5>

s3604367 2017-03-30 08:54
So unit tests are really difficult with Eloquent models, the guy tells we can do integration tests

s3604367 2017-03-30 08:54
<https://github.com/rmit-s3604367-johnny-huynh/SE-PT-Assignment/blob/dev/tests/Integration/CustomerTest.php>

s3604367 2017-03-30 08:54
I've just got a single integration test case working after hours of research

s3604367 2017-03-30 09:11
So if you guys are lost about testing here's some key points you need to know. *Acceptance testing* is actual input and testing the output from the browser (Dusk). *Integration testing* is done through requests and databases similar to acceptance but without the UI. *Unit testing* is the foundation function tests without the use of a database or anything. I may need more help on describing what unit tests are in Laravel but this is what I know so far.

s3537901 2017-03-30 09:52
Don't we need unit test specifically for TDD?

s3604367 2017-03-30 10:15
We need testing in general Homy said Dusk is fine

s3604367 2017-03-30 10:16
But its good to try to put some unit tests in our project to "generally" have all tests

s3604367 2017-03-30 10:16
In case we lose marks for some reason

s3604367 2017-03-30 10:17

He also said do unit tests so like I said its best we try do it even though we've coded already

s3537901 2017-03-30 10:24

Ok so what sort of tests should I do for history of bookings

s3604367 2017-03-30 10:39

For dusk test you can assert to see what's shown on the page

s3604367 2017-03-30 10:39

E.g. table columns

s3604367 2017-03-30 10:40

Integration tests, you can factory create 4-10+ bookings and check if it's in the database

s3604367 2017-03-30 10:40

And you can set so that you get history of bookings in a month or so etc

s3604367 2017-03-30 10:41

I'm not quite sure what to do you unit tests but you should try do some research on it and you'll probably have something for it

s3537901 2017-03-30 10:44

I'm just confused where to start. I know I need to write the tests THEN create the page but I don't really know where to even start with the tests

s3604367 2017-03-30 10:45

You start with tests

s3604367 2017-03-30 10:45

Your tests will fail then you start coding to fix the failures

s3537901 2017-03-30 10:46

yes I know that

s3537901 2017-03-30 10:46

I dont know where or how to write the tests

s3604367 2017-03-30 10:47

You can start at integration testing and test to get a history of bookings

s3604367 2017-03-30 10:47

Check if its in the db properly

s3604367 2017-03-30 10:47

 **s3604367** 2017-03-30 10:47
testBookingsIsInDatabase

 **s3604367** 2017-03-30 10:47
eg

 **s3604367** 2017-03-30 10:48
and you can start making tests on dusk for ui stuff eg login as admin and visit
/admin/history

 **s3537901** 2017-03-30 10:48
so i do this in tests\unit with phpunit and call a function in the bookings
class?

 **s3604367** 2017-03-30 10:48
Unit is for *unit testing*

 **s3537901** 2017-03-30 10:48
right ok, so where to the other tests
go

 **s3537901** 2017-03-30 10:48
this is what im trying to get

 **s3537901** 2017-03-30 10:48
what is the workflow of the
tests?

 **s3604367** 2017-03-30 10:49
- /Browser = Acceptance
Test

 **s3604367** 2017-03-30 10:49
- /Integration = Integration
tests

 **s3604367** 2017-03-30 10:49
- /Unit = unit tests

 **s3537901** 2017-03-30 10:49
ok do I run them all with php unit
orrrrr?

 **s3537901** 2017-03-30 10:49
and do I create a function in booking to
call?

 **s3604367** 2017-03-30 10:49
for dusk tests you run `php artisan
dusk`

 **s3604367** 2017-03-30 10:50
For all other tests
`vendor/bin/phpunit`

 **s3604367** 2017-03-30 10:50

 What do you mean?

 **s3537901** 2017-03-30 10:51
what exactly am I testing? I have to call a function to test right? So where is this function?

 **s3604367** 2017-03-30 10:51
You dont have it yet

 **s3537901** 2017-03-30 10:51
Where should this function go i mean

 **s3537901** 2017-03-30 10:52
do I make it in the bookings class then call that function from the view?

 **s3604367** 2017-03-30 10:55
My idea would be calling Booking::all() will get all bookings which is the history of bookings

 **s3604367** 2017-03-30 10:55
Theres no need to make another function when its already there

 **s3537901** 2017-03-30 10:55
ah but i need to show all bookings that are over a week/month old

 **s3604367** 2017-03-30 10:55
Though do you want to limit it? How is this going to be displayed?

 **s3604367** 2017-03-30 10:56
You do it through tests and assert accordingly

 **s3537901** 2017-03-30 10:56
So the summary of bookings show future bookings

 **s3604367** 2017-03-30 10:56
future?

 **s3604367** 2017-03-30 10:56
You mean latest

 **s3537901** 2017-03-30 10:56
And the history shows books that are expired

 **s3537901** 2017-03-30 10:57
so for the next week

 **s3604367** 2017-03-30 10:57
Yeah

s3604367 2017-03-30 10:57
I guess future too

s3537901 2017-03-30 10:57
next week = future bookings
no?

s3604367 2017-03-30 10:57
So you want a history of bookings for the past month? then you think of a function Bookings-
>history()

s3604367 2017-03-30 10:58
Put that function in your test

s3537901 2017-03-30 10:58
yes but what file does that function go in?
BookingController?

s3604367 2017-03-30 10:58
and then expect a result

s3604367 2017-03-30 10:58
The model

s3537901 2017-03-30 10:59
which directory is that contained
in?

s3604367 2017-03-30 10:59
app

s3604367 2017-03-30 10:59
Heres an example

s3537901 2017-03-30 10:59
so app\booking.php

s3604367 2017-03-30 10:59
@s3604367 uploaded a file: https://sept-lcjj.slack.com/files/s3604367/F4S18BKKN/pasted_image_at_2017_03_30_09_59_pm.png

s3604367 2017-03-30 10:59
Yes.

s3537901 2017-03-30 11:00
yes I watched that video but it didnt really help me get
started

s3537901 2017-03-30 11:00
I get the idea just not the workflow and where everything needs to
go

s3604367 2017-03-30 11:01

Well laravel is very flexible you can do it in a lot of different ways

s3537901 2017-03-30 11:02

so I start with something like this

s3537901 2017-03-30 11:02

@s3537901 uploaded a file: https://sept-lcjj.slack.com/files/s3537901/F4R9M46N5/pasted_image_at_2017_03_30_10_02_pm.png

s3537901 2017-03-30 11:03

then write the tests for it, then code the actual function to pass the tests, then call the function from the view?

s3604367 2017-03-30 11:03

Dont code at all until you write your tests

s3604367 2017-03-30 11:03

I'll make an example, give me a sec

s3537901 2017-03-30 11:04

ill just get a php error then rather than a test fail

s3604367 2017-03-30 11:04

Because theres many many ways to approach this

s3537901 2017-03-30 11:04

this will make it fail without errors

s3604367 2017-03-30 11:04

Of course but key thing is to only start when tests are written

s3604367 2017-03-30 11:04

Even not having the function existing

s3604367 2017-03-30 11:04

You're just cutting corners

s3537901 2017-03-30 11:05

well i cant test something that isnt there to start with

s3604367 2017-03-30 11:05

s3604367 2017-03-30 11:05

Just give me a moment I'll write something
up

s3537901 2017-03-30 11:05

I need to fail the tests -> write the function -> implement the
function

s3604367 2017-03-30 11:07

Yeah I know that but the whole aspect of tdd is to write the test assumption
first

s3604367 2017-03-30 11:15

@s3604367 uploaded a file: <https://sept->

[lcjj.slack.com/files/s3604367/F4R8VV3PS/pasted_image_at_2017_03_30_10_15_pm.png](https://sept-lcjj.slack.com/files/s3604367/F4R8VV3PS/pasted_image_at_2017_03_30_10_15_pm.png)

s3604367 2017-03-30 11:15

I'm integration testing

s3604367 2017-03-30 11:21

@s3604367 uploaded a file: <https://sept->

[lcjj.slack.com/files/s3604367/F4RTRA4NP/pasted_image_at_2017_03_30_10_21_pm.png](https://sept-lcjj.slack.com/files/s3604367/F4RTRA4NP/pasted_image_at_2017_03_30_10_21_pm.png)

s3604367 2017-03-30 11:22

That's one way

s3604367 2017-03-30 11:22

And I may be missing a few bits here and
there

s3604367 2017-03-30 11:22

But I havent started coding yet because maybe my logic might be
wrong

s3604367 2017-03-30 11:26

@s3604367 uploaded a file: <https://sept->

[lcjj.slack.com/files/s3604367/F4S1HTP28/pasted_image_at_2017_03_30_10_26_pm.png](https://sept-lcjj.slack.com/files/s3604367/F4S1HTP28/pasted_image_at_2017_03_30_10_26_pm.png)

s3604367 2017-03-30 11:28

Heres my error for it

s3604367 2017-03-30 11:28

@s3604367 uploaded a file: <https://sept->

[lcjj.slack.com/files/s3604367/F4SLSGJLF/pasted_image_at_2017_03_30_10_28_pm.png](https://sept-lcjj.slack.com/files/s3604367/F4SLSGJLF/pasted_image_at_2017_03_30_10_28_pm.png)

s3604367 2017-03-30 11:28

Fixed it

s3604367 2017-03-30 11:28

@s3604367 uploaded a file: [https://sept-](https://sept-lcjj.slack.com/files/s3604367/F4RTTJJF/pasted_image_at_2017_03_30_10_28_pm.png)

[lcjj.slack.com/files/s3604367/F4RTTJJF/pasted_image_at_2017_03_30_10_28_pm.png](https://sept-lcjj.slack.com/files/s3604367/F4RTTJJF/pasted_image_at_2017_03_30_10_28_pm.png)

s3604367 2017-03-30 11:28

Next error

s3604367 2017-03-30 11:28

@s3604367 uploaded a file: [https://sept-](https://sept-lcjj.slack.com/files/s3604367/F4R9WBDHP/pasted_image_at_2017_03_30_10_28_pm.png)

[lcjj.slack.com/files/s3604367/F4R9WBDHP/pasted_image_at_2017_03_30_10_28_pm.png](https://sept-lcjj.slack.com/files/s3604367/F4R9WBDHP/pasted_image_at_2017_03_30_10_28_pm.png)

s3604367 2017-03-30 11:31

My goal is to try to pass data from a get request to `/admin/history` so I can do `@foreach (\$bookings as \$booking)` etc..

s3604367 2017-03-30 11:33

Okay so I removed status because it might be too confusing but I want data passed to that url

s3604367 2017-03-30 11:33

@s3604367 uploaded a file: [https://sept-](https://sept-lcjj.slack.com/files/s3604367/F4R92JDUG/pasted_image_at_2017_03_30_10_33_pm.png)

[lcjj.slack.com/files/s3604367/F4R92JDUG/pasted_image_at_2017_03_30_10_33_pm.png](https://sept-lcjj.slack.com/files/s3604367/F4R92JDUG/pasted_image_at_2017_03_30_10_33_pm.png)

s3604367 2017-03-30 11:34

Seems like theres nothing there

s3604367 2017-03-30 11:34

Now I start coding

s3537901 2017-03-30 11:35

This just makes things more confusing

s3537901 2017-03-30 11:36

like what is acting as and why are you parsing using json

s3604367 2017-03-30 11:36

It's extremely hard to understand if you dont know the frameworks documentary

s3604367 2017-03-30 11:36

<https://laravel.com/docs/5.4/http-tests>

s3604367 2017-03-30 11:36

In laravels latest build they use JSON to deal with requests and to test them

s3604367 2017-03-30 11:37

s3604367 2017-03-30 11:37

I learnt that the hard way and wasted hours by ignoring it

s3604367 2017-03-30 11:37

wasting

s3537901 2017-03-30 11:39

since you aren't calling any function that i can see, is it actually testing the page itself?

s3604367 2017-03-30 11:43

It's testing if I pass data through that url

s3604367 2017-03-30 11:43

It calls the route, which calls the controller

s3604367 2017-03-30 11:44

In my case I can call the method in the controller showHistory

s3537901 2017-03-30 11:44

why is it so complex?

s3604367 2017-03-30 11:44

@s3604367 uploaded a file: https://sept-lcjj.slack.com/files/s3604367/F4S0K05T4/pasted_image_at_2017_03_30_10_44_pm.png

s3604367 2017-03-30 11:45

This is just one way of doing it

s3537901 2017-03-30 11:45

Why can't I just say to a test that puts 2 things in the DB one a week ago and one set for next week then test that only the first one appears in the table?

s3601725 2017-03-30 11:45

You can write a function stub for unit tests. There's nothing wrong with that

s3537901 2017-03-30 11:45

why all the json crap?

s3537901 2017-03-30 11:46

seems to be overengineering and overcomplicating something that should be simple

s3604367 2017-03-30 11:47

This is just one way, there are many other simple ways of doing it

s3537901 2017-03-30 11:47
ok

s3537901 2017-03-30 11:48

Sorry I'm just getting frustrated with the many layers of abstraction here preventing me from just coding

s3601725 2017-03-30 11:48

Lachy you can just put stuff in the database and then test it like that. That would be also be an integration test

s3601725 2017-03-30 11:49

A unit test cant be performed on a database. Thats more for stuff like validation

s3604367 2017-03-30 11:49

Yeah validation is more for integration

s3604367 2017-03-30 11:49

I'm still learning a lot of this

s3604367 2017-03-30 11:49

I may be right or wrong

s3537901 2017-03-30 11:49

so i can just make a method like `getHistory()` which just returns an array of bookings that have `start_time < now`

s3537901 2017-03-30 11:50

then write test that call `getHistory()`?

s3601725 2017-03-30 11:50

Yes

s3604367 2017-03-30 11:50

Sure

s3537901 2017-03-30 11:51

Ok I'll do some tests for that then

s3604367 2017-03-30 11:53

This is how I solved customer username not having business owner username

s3604367 2017-03-30 11:53

@s3604367 uploaded a file: <https://sept->

s3604367 2017-03-30 11:54
Very similar to dusk testing

s3537901 2017-03-30 11:55
would database matching count as integration or unit testing?

s3604367 2017-03-30 11:55
Unit testing cannot touch the database at all

s3537901 2017-03-30 11:56
Even if the DB is reset after each test?

s3604367 2017-03-30 11:56
Usually you do that in integration testing no reason for it to reset in unit tests

s3537901 2017-03-30 11:57
alright

s3537901 2017-03-30 12:14
is something like this what I should be writing?

s3537901 2017-03-30 12:14
@s3537901 uploaded a file: https://icjj.slack.com/files/s3537901/F4S0WC6TU/pasted_image_at_2017_03_30_11_14_pm.png

s3604367 2017-03-30 12:16
Yeah that can work

s3604367 2017-03-30 12:17
I may of overcomplicated it since I was dealing with http requests

s3537901 2017-03-30 12:20
Not really sure how to come up with 6 tests but I'll give it a shot

s3604367 2017-03-30 12:22
One of them can be passing it though
view()

s3537901 2017-03-30 12:23
What do you mean?

s3537901 2017-03-30 12:24
the idea is just to call Booking::getHistory then just do a foreach on it in the view

s3604367 2017-03-30 12:30

I think you should put that test class in just BookingsTest so you can populate it with other stuff related to bookings

s3537901 2017-03-30 12:31

Shouldnt it be in its own file since its specifically for one function?

s3537901 2017-03-30 12:32

they all test the history booking not the other form of bookings (latest/future)

s3604367 2017-03-30 12:33

Yeah but what other test can you make other than showing history?

s3604367 2017-03-30 12:33

tests

s3537901 2017-03-30 12:34

that should be covered by the other tests we wrote for the bookings? Or are they gone now?

s3604367 2017-03-30 12:36

This?

s3604367 2017-03-30 12:36

[https://github.com/rmit-s3604367-johnny-huynh/SE-PT-](https://github.com/rmit-s3604367-johnny-huynh/SE-PT-Assignment/blob/d5e504f8331058536ac6f58418e70d7b2edcb3d0/tests/Unit/GetBookingSummaryTest.p)

[Assignment/blob/d5e504f8331058536ac6f58418e70d7b2edcb3d0/tests/Unit/GetBookingSummaryTest.p](https://github.com/rmit-s3604367-johnny-huynh/SE-PT-Assignment/blob/d5e504f8331058536ac6f58418e70d7b2edcb3d0/tests/Unit/GetBookingSummaryTest.p)

s3604367 2017-03-30 12:41

That's the only one I see from what Craig made

s3537901 2017-03-30 12:44

yes, the last few tests are ones which i wrote

s3604367 2017-03-30 12:44

Yeah add it back if it's reasonable

s3604367 2017-03-30 12:48

I didn't know specifically what we needed to do for bookings back then

s3604367 2017-03-30 14:02

@s3604367 uploaded a file: [https://sept-](https://sept-icij.slack.com/files/s3604367/F4S3S5D7E/pasted_image_at_2017_03_31_01_02_am.png)

[icij.slack.com/files/s3604367/F4S3S5D7E/pasted_image_at_2017_03_31_01_02_am.png](https://sept-icij.slack.com/files/s3604367/F4S3S5D7E/pasted_image_at_2017_03_31_01_02_am.png)

s3604367 2017-03-30 14:02
I've added a duration function to
booking

s3604367 2017-03-30 14:02
Added the test case to unit
testing

s3604367 2017-03-30 23:55
@s3600396 We still need a footer and those
titles

s3604367 2017-03-30 23:56
@s3600396 you're also required to do some
testing

s3537901 2017-03-30 23:59
Can I just do 3 tests for this function? Since I am struggling to come up with any more that aren't
repeating previous tests

s3604367 2017-03-30 23:59
Sure I'll try make some more

s3604367 2017-03-30 23:59
As long as you contributed it's
fine

s3604367 2017-03-31 00:00
I promise I won't remove it this time
:slightly_smiling_face:

s3537901 2017-03-31 00:01
Also i forgot to push last night but all the tests should be in the repo
now

s3537901 2017-03-31 00:12
Why am I getting customer id NOT NULL constraint violations when using factory for the
bookings?

s3604367 2017-03-31 00:41
You need to assign a customer id to the
factory

s3604367 2017-03-31 00:41
factory

s3604367 2017-03-31 00:41
I think I fixed it when I was working on it last
night

s3604367 2017-03-31 00:42

@s3604367 uploaded a file: <https://sept->

[lcjj.slack.com/files/s3604367/F4RNYR6GZ/pasted_image_at_2017_03_31_11_42_am.png](https://slack.com/files/s3604367/F4RNYR6GZ/pasted_image_at_2017_03_31_11_42_am.png)

s3537901 2017-03-31 00:42

ah so you need to make a customer as well?

s3604367 2017-03-31 01:13

Yeah

s3604367 2017-03-31 09:13

Okay I fixed it, I called make() which was meant to call create() since it needs to persist in the database

s3537901 2017-03-31 09:44

Ok so my tests should be failing rather than erroring now, thanks

s3604367 2017-04-02 03:54

You working on add employee craig?

s3601725 2017-04-02 03:54

Yeah

s3604367 2017-04-02 03:54

Alright awesome, let me know if you're hitting any roadblocks, or if I need to do anything

s3601725 2017-04-02 03:55

Nah should be good. I already made the page and set all the routes. Just forgot to move the thing

s3601725 2017-04-02 03:55

Just working on validation/testing

s3604367 2017-04-02 03:55

:+1:

s3601725 2017-04-02 06:18

Employee adding page is done, Am I supposed to be writing integration tests for it or whats the go there?

s3604367 2017-04-02 06:24

Yeah just do integration tests

s3604367 2017-04-02 06:25

Better than no tests

s3601725 2017-04-02 06:25
Ok cool

s3600396 2017-04-02 06:57
Wat

s3600396 2017-04-02 06:57
Wasn't I doing that?

s3600396 2017-04-02 06:57
I'm doing form validation
ATM

s3601725 2017-04-02 07:16
I thought we discussed you were supposed to make the form and I was supposed to do the backend

s3600396 2017-04-02 07:25
Yea I got the form

s3600396 2017-04-02 07:25
And the routing

s3600396 2017-04-02 07:25
Dw DW just use my form I
guess

s3601725 2017-04-02 07:26
You were supposed to have it done yesterday. I already made one

s3600396 2017-04-02 07:26
:/

s3600396 2017-04-02 07:27
Doesn't matter then want me to make a branch and push mine or nah?

s3604367 2017-04-02 07:31
No you work on the dev branch so we have dont any confusion with branches

s3604367 2017-04-02 07:31
Just git pull everytime you start work

s3600396 2017-04-02 07:33
Yea I pulled it when I started working on it yesterday

s3600396 2017-04-02 07:35
DW I'll pull and then push when I get home

s3604367 2017-04-02 07:37

You also need to work on some test cases

s3604367 2017-04-02 07:37

As required from Homy

s3600396 2017-04-02 09:22

wat do you want test cases for?

s3604367 2017-04-02 09:31

It's on the Trello board

s3537901 2017-04-02 12:22

Should the `getHistory()` function be located in the booking controller rather than the booking class? Since it is more overall functionality rather than specific object functionality IE not related to just one booking

s3604367 2017-04-02 13:53

Yes

s3601725 2017-04-03 15:19

Viewing working hours, adding working hours and viewing employee availability should all be working. Let me know if there are any problems

s3601725 2017-04-03 15:19

All code is up on github

s3604367 2017-04-04 10:45

Good idea by keeping add work time and roster together

s3604367 2017-04-04 10:46

Working on wireframes now, theres gonna be changes but I'll take care of almost all of it

s3600396 2017-04-04 12:46

umm guys i think something is wrong with the route

s3600396 2017-04-04 12:47

i cant get onto

localhost:8000/admin

s3600396 2017-04-04 13:24

nvm i fixed it

s3604367 2017-04-04 16:12

I've fixed your history of bookings tests
s3537901

s3604367 2017-04-04 16:20

 I've cleaned up your business information page
Jarry

 **s3537901** 2017-04-04 19:46
Thanks Johnny, did you figure out how to call the controller or did you fix it some other way?

 **s3604367** 2017-04-05 08:40
@s3537901 can you finish off your user story? Also, when you have time can you read over all the user stories? We have to make sure all stories are up to date and related to our system

 **s3537901** 2017-04-05 12:51
Yep alright. I'll work on all that stuff tomorrow and do some tests as well, I have the day off so I should be able to get everything done

 **s3600396** 2017-04-06 03:07
guys the database doesnt even work for add employee

 **s3600396** 2017-04-06 03:08
you guys are missing

 **s3600396** 2017-04-06 03:08
`firstname`, `lastname`, `title`, `phone`, `updated_at`,
`created_at`

 **s3600396** 2017-04-06 03:09
in the database we only have id name created_at
updated_at

 **s3604367** 2017-04-06 03:30
You havent migrated the db

 **s3604367** 2017-04-06 03:31
And I'm in the middle of refactoring a lot of features

 **s3600396** 2017-04-06 03:31
oh mb

 **s3537901** 2017-04-06 05:46
How do you access the business registration? I've tried /admin and /admin/register but I cant seem to get to the right page

 **s3604367** 2017-04-06 05:57
You use /admin

 **s3604367** 2017-04-06 05:57
I havent had any issues yet

 **s3604367** 2017-04-06 05:58

I'm going to push my build there's a lot of changes since I built test cases around it

s3537901 2017-04-06 05:58
/admin redirects me to login

s3604367 2017-04-06 05:58
That means the business is registered

s3604367 2017-04-06 05:58
Rollback your migration

s3537901 2017-04-06 05:58
ah i might have to refresh the db

s3604367 2017-04-06 05:58
Yeah

s3537901 2017-04-06 05:58
thanks man

s3537901 2017-04-06 05:59
ok its working now thanks

s3604367 2017-04-06 06:12
I'm currently working on working times and the dashboard

s3604367 2017-04-06 06:12
What are you guys working on? So I don't overlap anything

s3537901 2017-04-06 06:14

I've just finished doing the user stories review, all the functionality is captured. I'm going to work on some tests, just deciding which one to work on now

s3604367 2017-04-06 06:25
I am doing testing on working times

s3604367 2017-04-06 06:26
You should do tests on add employee

s3537901 2017-04-06 06:26
yeah that was the one i picked

s3604367 2017-04-06 06:26
testing validation rules

s3604367 2017-04-06 06:26

existing rules and rules you can think of making

s3537901 2017-04-06 06:26
form validation like the one of customerTest?

s3604367 2017-04-06 06:26
Yeah very similar

s3537901 2017-04-06 06:28

Based on customerTest, I assume each field gets tested individually? So one test for title then one test for first name and so on?

s3604367 2017-04-06 06:48
Yes

s3537901 2017-04-06 06:58

Am I missing something for testing? I can't get assertJson to work either on my own tests or in tests that should already working (like customerTest). When i run phpunit i get a 'NotFoundException'

s3604367 2017-04-06 06:59
Teamviewer?

s3537901 2017-04-06 06:59
yeah ok one second

s3537901 2017-04-06 06:59
629 715 594

s3537901 2017-04-06 06:59
99x9tj

s3604367 2017-04-06 07:03
give me a sec I'll push all my changes now

s3537901 2017-04-06 07:09
What was the issue?

s3604367 2017-04-06 07:10
the app url was invalid I think

s3604367 2017-04-06 07:10
and I've also made an env file for your testing

s3537901 2017-04-06 07:10
ah ok thanks for fixing it!

s3604367 2017-04-06 07:10
so it should test inside the test

so it should test inside the test
db

s3537901 2017-04-06 07:14

What is the second parameter of the assertJson? I cant find much documentation for it

s3604367 2017-04-06 07:15

It's an optional message if tests fail, phpunit docs has it I think

s3604367 2017-04-06 07:15

But I'm not sure it works

s3604367 2017-04-06 07:15

You can remove it

s3537901 2017-04-06 07:15

hmm, its the only things thats different but my test is failing

s3604367 2017-04-06 07:15

Also, you can use assertJsonFragment and it will find the string instead of keys and values in the response

s3604367 2017-04-06 07:16

```
`$response->assertJsonFragment(['This is an error message'])`
```

s3537901 2017-04-06 07:16

nevermind i forgot to change one of the lines

s3604367 2017-04-06 07:16

Much more simplified

s3537901 2017-04-06 07:16

ah thanks ill use that

s3604367 2017-04-06 07:17

Look at the BookingController and you'll see how I separated rules and messages for validation

s3604367 2017-04-06 07:17

No wait

s3604367 2017-04-06 07:18

```
`WorkingTimeController`
```

s3604367 2017-04-06 07:18

Just ignore line 15 - 47

s3604367 2017-04-06 07:19

Thats so it validates dates

properly

s3537901 2017-04-06 07:19

ah so these are the error messages that are passed back?

s3604367 2017-04-06 07:19

Yeah you can customize them however you want

s3537901 2017-04-06 07:21

my regex is a bit rusty, this means no special characters right? `regex:/^[A-z\-\.\]+$/`

s3604367 2017-04-06 07:22

You can easily use ``alpha``

s3604367 2017-04-06 07:22

Or from the customer controller ``regex:/^[A-z\']+$/'`

s3604367 2017-04-06 07:22

Which includes ```

s3537901 2017-04-06 07:22

no im just decoding the field requirements

s3604367 2017-04-06 07:23

That means alpha including - and .

s3604367 2017-04-06 07:23

From start to end of string

s3537901 2017-04-06 07:24

ah ok so its the same sort of code used for customer registration?

s3604367 2017-04-06 07:24

Similar but it can include ``` e.g ``John O' Doe``

s3537901 2017-04-06 07:25

oh yeah that makes sense

s3604367 2017-04-06 08:42

Also, if you want to debug you can use ``dd($array or json response)`` in your test cases

s3604367 2017-04-06 08:43

``dd()`` means debug and dump

s3604367 2017-04-06 08:43

Correction - die and dump

s3604367 2017-04-06 09:12

You can use `vendor/bin/phpunit -h` for phpunit help

s3604367 2017-04-06 09:15

`vendor/bin/phpunit tests/Integration --repeat 10` is useful to check if tests work over repeated times

s3604367 2017-04-06 11:04

Okay working times should be done with test cases

s3604367 2017-04-06 17:07

Okay almost everything is done

s3604367 2017-04-06 17:07

Today I'll just work on browser tests, and then it's off to documentation

s3604367 2017-04-06 17:08

If you can, you can try do browser tests with me

s3601725 2017-04-07 07:45

Ok what browser tests need to be done?

s3601725 2017-04-07 07:45

Finished up at work for the week so this is my priority now

s3604367 2017-04-07 07:48

should be on the Trello board

s3604367 2017-04-07 07:51

<https://trello.com/c/eagODzx/89-13-dusk-tests>

s3601725 2017-04-07 07:53

You take the first 3 I'll take the 2nd 3 then?

s3604367 2017-04-07 07:53

I got to do the class diagram

s3601725 2017-04-07 07:54

Okay. I'll just work from the top down then

s3601725 2017-04-07 07:54

Just don't want to end up working on something someone else is already doing

doing

s3604367 2017-04-07 09:40

I'm going to ask Homy is remove or edit employee is needed for the functionality

s3601725 2017-04-07 12:29

Just realized the readme on github says we are in the Tuesday 8:30 tutorial

s3604367 2017-04-07 13:41

Yeah woops

s3604367 2017-04-07 13:58

Fixed it

s3604367 2017-04-07 18:45

I'm waiting for your Dusk test cases before I finish off test case documentation

s3601725 2017-04-08 06:43

Yeah no problem. I'll try to finish them tonight

s3604367 2017-04-08 07:36

I've refactored redirection with middleware recently so it may be different for previous dusk cases such as visiting /admin going to /admin/register. /admin now goes to /login and /admin/register is where you register business owner.

s3601725 2017-04-08 09:02

I thought thats what it always did but okay

s3604367 2017-04-08 09:03

Originally the redirect condition was repeated over 4+ other functions

s3601725 2017-04-08 09:04

Oh yeah, I was gonna clean that up anyway but if you did it its all good

s3604367 2017-04-08 09:04

Now I'm not sure how employee availability is going to work

s3604367 2017-04-08 09:04

Spec says to view employee availability

s3604367 2017-04-08 09:04

Nothing else

s3601725 2017-04-08 09:05

Rule 1 of projects, if its not in the scope, not your fuckin

problem

s3604367 2017-04-08 09:05

I guess so, we've worked just as hard to understand the framework compared to Java

s3604367 2017-04-08 09:05

twice*

s3601725 2017-04-08 09:06

Yeah I wouldn't be worried about not getting a good mark, from what I could tell we were doing very well compared to everyone else. Even the ones just doing java projects

s3537901 2017-04-08 09:45

Hey guys anything you want help with? I've been at work all day but I clock off in 15 so I can work on stuff when I get home

s3604367 2017-04-08 09:49

I'm putting all the user stories together

s3604367 2017-04-08 09:49

We need to put everything into the project folder for submission

s3604367 2017-04-08 09:49

Checklist is on Trello

s3604367 2017-04-08 09:50

I'll make a folder called
_DOCUMENTS

s3604367 2017-04-08 10:05

I've made a _DOCUMENTS folder on dev

s3604367 2017-04-08 10:05

<https://trello.com/c/JkuiVWfR/77-5-submission-requirements>

s3601725 2017-04-08 10:15

Possibly stupid question. I thought homy said we should only have a Monday-Sunday thing for working times, not a week based system?

s3604367 2017-04-08 10:16

I really don't know, the spec says add working time for next month

s3537901 2017-04-08 10:16

I think he said week system because if you have something like a hairdressers you want weekend work times

work times

s3601725 2017-04-08 10:17

Yeah but then Homy said just do a week system, not the month thing

s3604367 2017-04-08 10:18

@s3604367 uploaded a file: [https://sept-](https://sept-lcjj.slack.com/files/s3604367/F4WGJRK1S/pasted_image_at_2017_04_08_08_18_pm.png)

[lcjj.slack.com/files/s3604367/F4WGJRK1S/pasted_image_at_2017_04_08_08_18_pm.png](https://sept-lcjj.slack.com/files/s3604367/F4WGJRK1S/pasted_image_at_2017_04_08_08_18_pm.png)

s3537901 2017-04-08 10:20

Ah so it's just like an extra thing

s3604367 2017-04-08 10:21

That's for availability though

s3604367 2017-04-08 10:21

Which is confusing

s3604367 2017-04-08 10:21

I feel like the assignment is more catered for Java programmers than it is for PHP

s3604367 2017-04-08 10:46

Okay I've done most of the checklist

s3604367 2017-04-08 10:47

Now we need the history of slack

s3604367 2017-04-08 10:47

Export it to a pdf
